Claims 13-16, 18, & 19 are rejected under 35 U.S.C. 102(b) as being anticipated by Slates 5,406,712.

Slates shows a sight pin block having sight pin openings 15 for a series of sight pins. To adjust the sight of Slates, one would fire test shots for different yardages to determine the correct positioning of each of the five pins 31. These pins would then be locked in position using screws 41. The pin positioning would then be correct for a bow having a speed of the test bow (say, 280 feet per second). If the sight pin block were to be transferred to another bow with a speed of 280 feet per second, it would only be necessary to determine the corresponding arrow flight range for one of the pins; each of the other pins will then be in correct position.

It is not clear what is meant by "without any need to manually position such other sight pins in their openings"; in applicant's invention, it appears that pins 32, 34, 36, 38 are "manually positioned" in corresponding openings 32', 34', 36', 38'; likewise, in Slates, pins 31 are manually positioned in openings 15.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary

skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claim 17 is rejected under 35 U.S.C. 103(a) as being unpatentable over Slates in view of the "Bear Premier Hunting Sight".

The sight of Slates is apparently bolted to the surface of the riser, where it may fit awkwardly. One would recognize that a complementary opening in the riser to receive the sight would provide a better fit. For example, the Bear sight is mounted in an opening in the riser. One would recognize that mounting the sight of Slates in an opening in the riser would be desirable to provide a better fit. It would have been obvious to one of ordinary skill in the art to mount the sight of Slates in an opening in the riser, as suggested by the Bear sight.

Applicant's arguments filed 11/12/02 have been fully considered but they are not persuasive.

We appreciate that applicant's attorney has argued several times that the bow sight of Slates does not include pin openings at fixed distances, selected so that pins do not have to be "manually positioned" to indicate their flight range. But it is still not clear how applicant's invention is different from Slates, since applicant's pins 30, 32, 34, 36, 38 are in fact "manually positioned" in openings 30', 32', 34', 36', 38'. The openings 15 in the

sight of Slates are definitely at fixed distances in block  
3.
